

# Build your own IOT platform with Hadoop & spark for Beginners

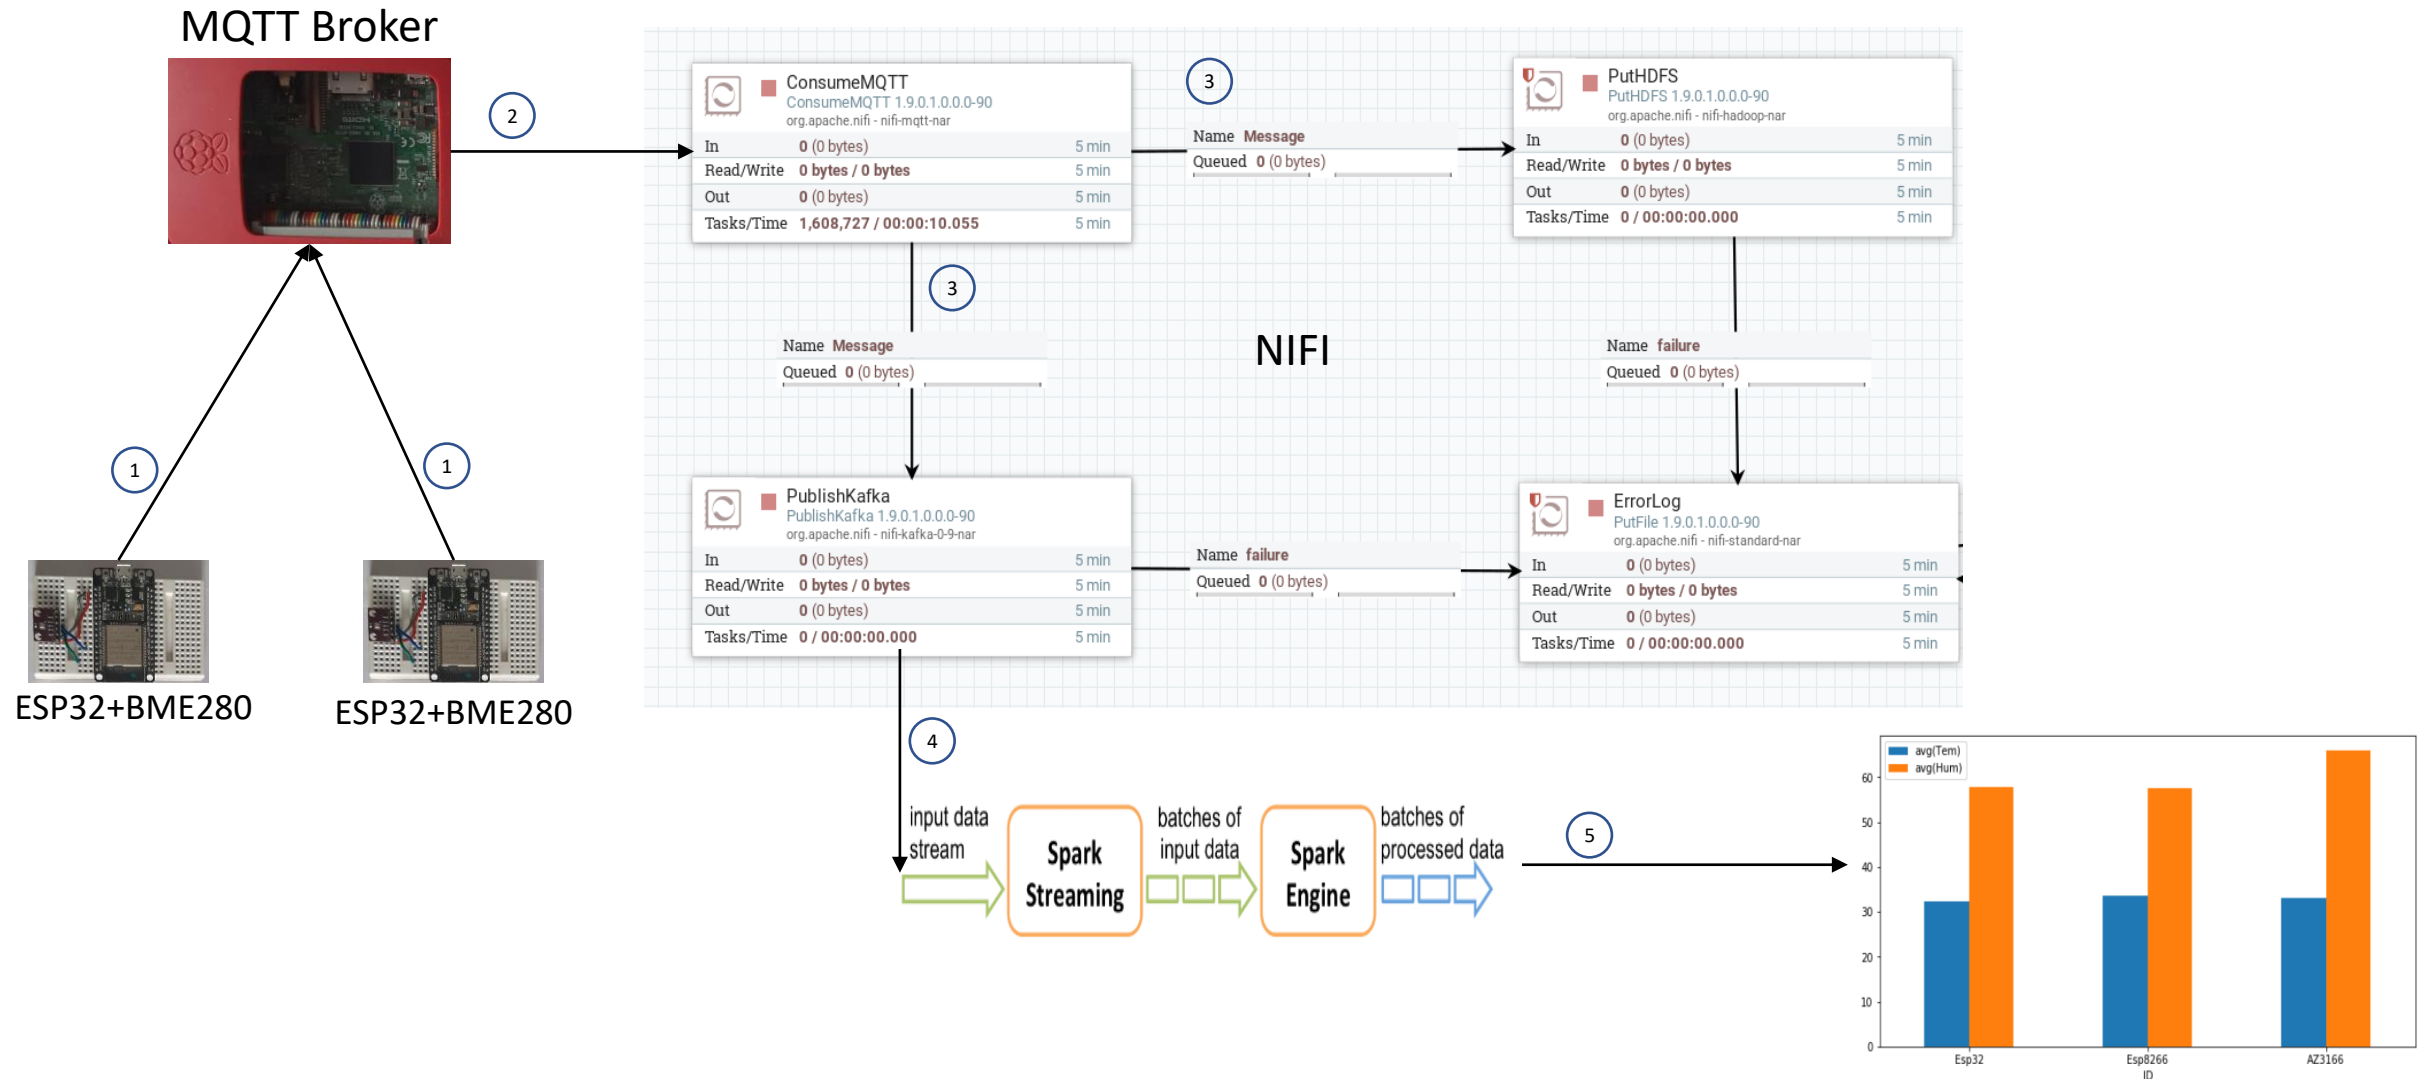

## Part-1

- Architecture
- Setting up MQTT Broker – Mosquitto
- Programming ESP32 with Arduino IDE
- VMware with cloudera QuickStart
- Setting up NIF, KAFA, SPARK2
- Routing data using NIFI to KAFA & HDFS
- Process streaming Data Using SPARK

# IOT with Hadoop Ecosystem (simple Architecture)

# IOT with Hadoop Ecosystem (simple Architecture)

# Installing MQTT Broker(Mosquitto) on Raspberry Pi

# Install MQTT Broker Mosquitto

## Step1: [Login into your Raspberry Pi Device]

OS version : - pi@raspberrypi:~ \$ cat /etc/os-release

Device Model : - pi@raspberrypi:~ \$ cat /proc/device-tree/model

```
pi@raspberrypi: ~  
pi@raspberrypi:~ $ cat /etc/os-release  
PRETTY_NAME="Raspbian GNU/Linux 8 (jessie)"  
NAME="Raspbian GNU/Linux"  
VERSION_ID="8"  
VERSION="8 (jessie)"
```

```
pi@raspberrypi: ~  
pi@raspberrypi:~ $ cat /proc/device-tree/model  
"Raspberry Pi 3 Model B Rev 1.2" pi@raspberrypi:~ $
```

## Step2: [Mosquitto installation]

pi@raspberrypi:~ \$ sudo apt update

pi@raspberrypi:~ \$ sudo apt install -y mosquitto mosquitto-clients

## Step3: [To Start Mosquitto on boot up]

pi@raspberrypi:~ \$ sudo systemctl enable mosquitto.service

## Step4:[Check Mosquitto Installation]

pi@raspberrypi:~ \$ mosquitto -v

```
pi@raspberrypi: ~  
pi@raspberrypi:~ $ mosquitto -v  
1590158928: mosquitto version 1.3.4 (build date 2018-09-28 22:21:32+0000) starting  
1590158928: Using default config.  
1590158928: Opening ipv4 listen socket on port 1883.  
1590158928: Error: Address already in use  
pi@raspberrypi:~ $
```

# Testing MQTT Broker Mosquitto

## Step5: [Subscribe to topic IOTtestTopic in Window1]

```
pi@raspberrypi:~ $ mosquitto_sub -d -t IOTtestTopic
```

```
pi@raspberrypi:~  
pi@raspberrypi:~ $ mosquitto_sub -d -t IOTtestTopic  
Client mosqsub/1381-raspberrypi sending CONNECT  
Client mosqsub/1381-raspberrypi received CONNACK  
Client mosqsub/1381-raspberrypi sending SUBSCRIBE (Mid: 1, Topic: IOTtestTopic, QoS: 0)  
Client mosqsub/1381-raspberrypi received SUBACK  
Subscribed (mid: 1): 0  
Client mosqsub/1381-raspberrypi received PUBLISH (d0, q0, r0, m0, 'IOTtestTopic', ... (10 bytes))  
IOT world!
```

## Step5: [Publish Message to topic IOTtestTopic from Window2]

```
pi@raspberrypi:~ $ mosquitto_pub -d -t IOTtestTopic -m "IOT world!"
```

After executing the above command in Window2 you can see the Message "IOT world" is printed in Window1,  
Your MQTT Broker is working properly.

```
2. 192.168.0.104 (pi) (1)  
pi@raspberrypi:~ $ mosquitto_pub -d -t IOTtestTopic -m "IOT world!"  
Client mosqpub/1382-raspberrypi sending CONNECT  
Client mosqpub/1382-raspberrypi received CONNACK  
Client mosqpub/1382-raspberrypi sending PUBLISH (d0, q0, r0, m1, 'IOTtestTopic',  
... (10 bytes))  
Client mosqpub/1382-raspberrypi sending DISCONNECT  
pi@raspberrypi:~ $
```

# Programming ESP32 with Arduino IDE

# Setting up ESP32 Device

## Required Items

### Hardware:

1. BME280 - 2
2. ESP32 – 2

### Software:

1. Arudino IDE
2. Programming - c/python

I have used

Setup1 : ESP32 + BME80

Setup2 : ESP8266 + BME280

for programming ESP32/ESP8266 I have used C.

This sensor communicates using I2C communication protocol

BME280	ESP32
Vin	3.3V
GND	GND
SCL	GPIO 22
SDA	GPIO 21

# Programming ESP32

## Step1:[Install Arduino IDE]

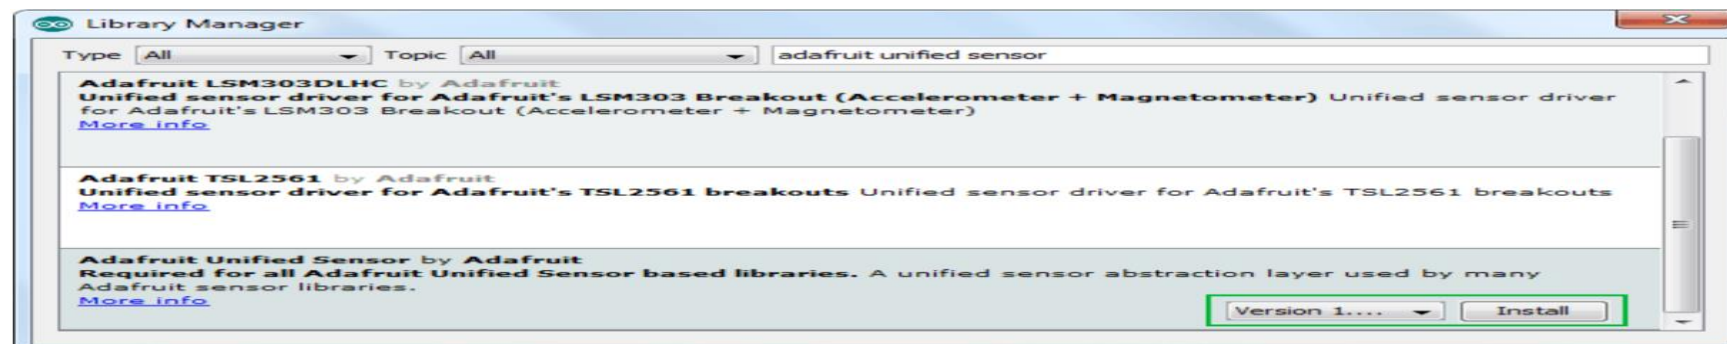

<https://www.arduino.cc/en/Main/Software> (current project IDE is installed on windows10)

## Step2:[Install BME280 library]

Open your Arduino IDE and go to **Sketch > Include Library > Manage Libraries**. The Library Manager should open. Search for “bme280 ” and install the library.

The BME280 sensor library uses the Adafruit sensor support\_backend. So, search the library manager for Adafruit Unified Sensor and install that too

# Programming ESP32

## Step3:[Additional Board Managers URL]

Go to **File>Preferences> Additional Board Manager URL's** add the below link  
[https://dl.espressif.com/dl/package\\_esp32\\_index.json](https://dl.espressif.com/dl/package_esp32_index.json)

## Step4:[Write the code to collect BME280 data and send to MQTT Broker]

Refer to Git Link : <https://github.com/rpalaani30/IOT-Hadoop/blob/master/Esp32Bme280.ino>

## Step5:[Set Board Manager before Compilation]

Go To **Tools>Board> Boards Manager>** select **"ESP2 Dev Module"** and press Upload button to compile and flash.  
Note : while flashing keep your Boot/Flash button pressed in ESP32 board.  
once flashing is completed. Press RST/EN button in your board. The device will start sending message to MQTT Broker.

## Step5:[Check your MQTT Broker]

```
pi@raspberrypi:~ $ mosquitto_sub -d -t Weather/#
Client mosqsub/1214-raspberrypi sending CONNECT
Client mosqsub/1214-raspberrypi received CONNACK
Client mosqsub/1214-raspberrypi sending SUBSCRIBE (Mid: 1, Topic: Weather/#, QoS: 0)
Client mosqsub/1214-raspberrypi received SUBACK
Subscribed (mid: 1): 0
Client mosqsub/1214-raspberrypi received PUBLISH (d0, q0, r0, m0, 'Weather/ESP32', ... (101 bytes))
{"ID":"Esp32","Date":"2020-05-23T19:28:52Z","Tem":32.49,"Hum":54.13672,"Per":95712.11,"Alt":478.1564}
Client mosqsub/1214-raspberrypi received PUBLISH (d0, q0, r0, m0, 'Weather/ESP32', ... (101 bytes))
{"ID":"Esp32","Date":"2020-05-23T19:28:57Z","Tem":32.47,"Hum":54.20996,"Per":95717.63,"Alt":477.6751}
Client mosqsub/1214-raspberrypi received PUBLISH (d0, q0, r0, m0, 'Weather/ESP32', ... (101 bytes))
{"ID":"Esp32","Date":"2020-05-23T19:29:02Z","Tem":32.45,"Hum":54.18652,"Per":95715.97,"Alt":477.8199}
```

Thank You
